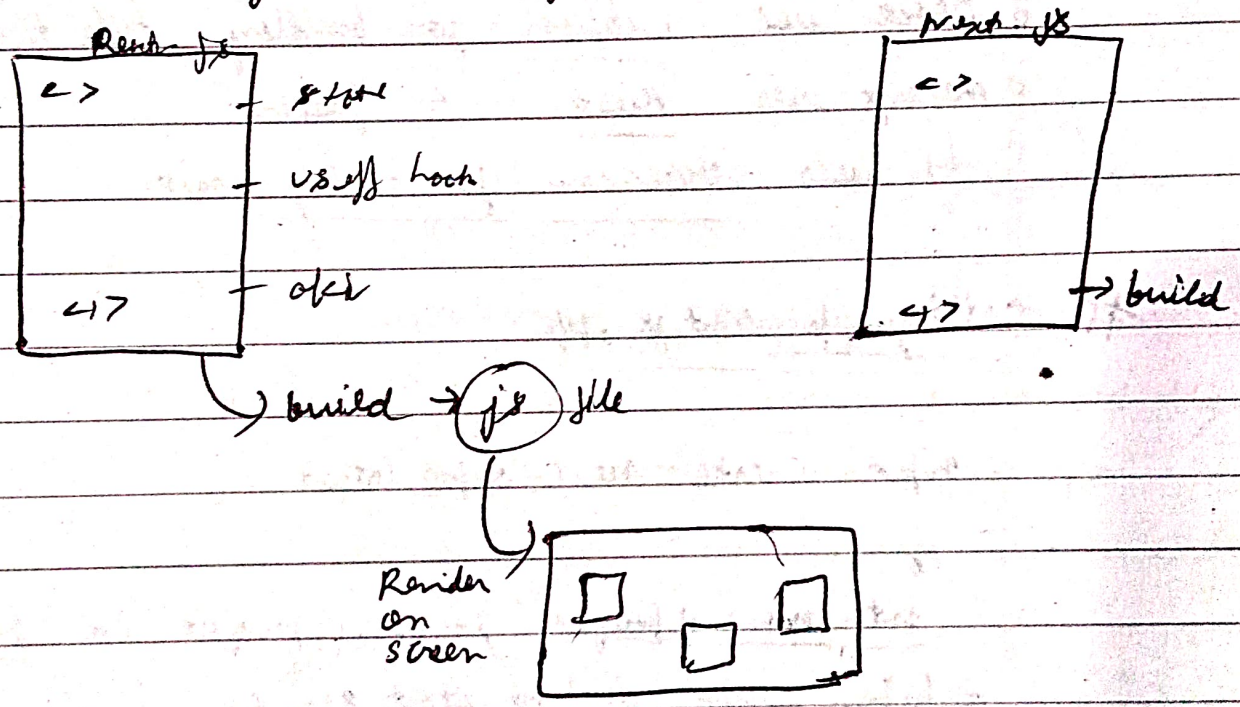
Next.js → It is a framework

- why next.js →

Problem with react is it does client side rendering & take more loading time for → Rendering component
→ hooks
→ api calls

(1)

=> resulting in slowing down the website load time



Next.js fetch data at build time and make html, CSS files and this can be directly used as html, CSS is fast and js is heavy.

(2) SEO - search engine optimization
↳ decrease in react.js due to lack of ~~time~~ loading time as it rank it below assume it to be blank in first place.

But in Next.js data is already loaded & SEO score doesn't affect.

② react-router-dom → for using multiple routing & pages in react
↳ this feature is built-in in next.js

④ Many feature - getStaticProps, getStaticPath, dynamic routing
SSR, CSR

- React use webpack for bundling - taffle time
- Next.js uses Rust ← faster
  ↳ uses vercel.com for deploy easier

Setting up Next.js app

- npx create-next-app@latest
- y
- enter name of project, - open project cd project name
- (npm run dev) to start server

file structure → .next → build automatic generated in this folder
node_modules → all installed package store here
public → static image, vedio
styles → CSS files
.eslintrc.json → plugin for enhancing code look
